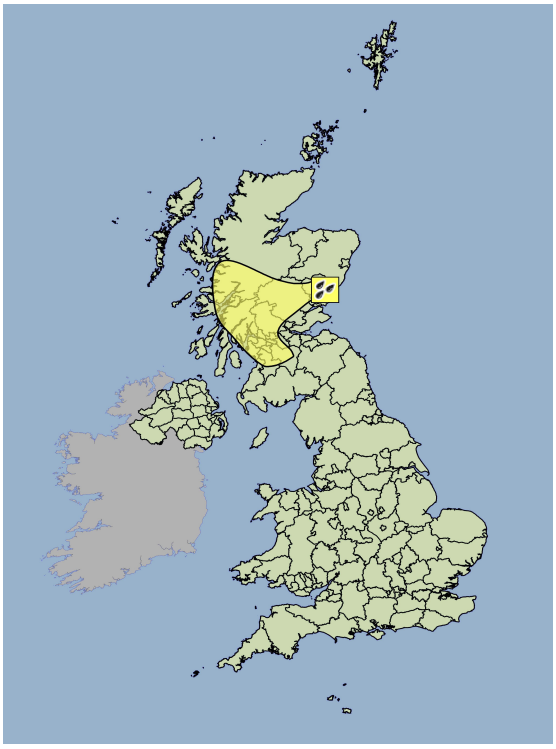
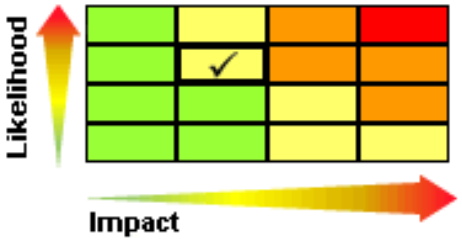
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system will move in across the west of Scotland on Saturday afternoon where it will become slow moving, only sinking south during Sunday afternoon. Rainfall totals of around 30 to 40 mm are expected widely across the area with 60 mm possible over the higher ground. These rainfall totals will be enhanced by melting of lying snow in the hills, which will increase the potential for localised flooding.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **15:00 on Sat, 22nd Feb 2014** until **15:00 on Sun, 23rd Feb 2014**

An area of rain will become slow moving across Argyll, Tayside and Central Scotland from Saturday afternoon through until Sunday afternoon. Milder conditions will also cause snow melt in the high ground. It will be windy on Saturday afternoon with southerly gales along the west coast.

The public should be aware of the risk of localised flooding, as well as surface water on many roads.

This is an update to the alert issued on Friday.
